3rd NOTICE: IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Naval Station Great Lakes Failed to Correct a Significant Deficiency Within Required Time Frame

Our water system was issued a violation on November 1, 2022 related to our drinking water. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation. While we work to correct the issue, we are required to send this notice to our customers every 3 months.

A routine inspection conducted recently by the USEPA found structural deterioration and areas of low water flow in our 'Clear Well' tank at the treatment plant. The 'Clear Well' supports the final stage of water treatment.

What should I do?

- There is nothing you need to do. Current sampling data confirms that the drinking water meets all regulatory requirements. You do not need to boil your water or take other corrective actions. However, if you have specific health concerns, consult your doctor.
- Although our water quality continues to meet standards, if you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

What does this mean?

- This is not an emergency. If it had been, you would have been notified within 24 hours. Water quality and residual disinfection levels are regularly monitored to ensure safe water in the system.
- While not the case in this situation, inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.
- These symptoms, however, are not caused only by organisms in drinking water, but also by other factors. If you experience any of these symptoms and they persist, you may want to seek medical advice.

What is being done?

While we are in the process of retaining an Architect/Engineering firm to plan and design for the construction action to correct the deficiency of the "Clear Well", temporary mitigation efforts are in place, including modified operational procedures and monitoring. As stated above, continued sampling data reported to the EPA confirms that the drinking water is safe and meets all regulatory requirements. Basically, parts of our treatment plant infrastructure are aging, but the water quality still meets and/or exceeds EPA Standards.

We continue to consult with the USEPA in the development of a corrective action plan/timeline for the permanent repair and will update our water consumers as information becomes available.

For more information, please contact Naval Station Great Lakes Public Affairs Officer at (847)688-2430 or john.l.sheppard.civ@us.navy.mil.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by NAVFAC Mid-Atlantic, PWD Great Lakes Utilities. State Water System ID#: IL0975227. Date distributed: 5/31/2023. Previous notice distributed on: 11/30/2022 and 2/28/2023
