Over the next year...

We will open industry access to government data by:

1. Publishing our APIs to government data and our federated data catalog to developers that agree to share data products across our enterprise

2. Creating a hub for labeled data and the collection of test and evaluation (T&E) tools and guidance so developers can develop responsible AI algorithms for projects like Replicator

3. Creating experimentation opportunities for developers to sit side by side users to get direct feedback on their products

4. Expanding the Tradewinds ecosystem to make it easier and faster for companies to enter the DOD marketplace

5. Coding positions and talent within DoD focused on data, analytics, and AI so we can attract the best and brightest talent to our hardest mission challenges
